The federal solar tax credit ends December 31, --homeowners have only until the end of this year to secure 30% savings. How many solar panels are needed for an 8kW system? To calculate the number of solar panels needed for an 8kW system, you must first know the wattage of the panels you plan to use. The formula is straightforward: divide the total system size (watts) by the wattage of a single panel. For example, using 400-watt monocrystalline panels, the calculation would be $8000 / 400 = 20$ panels. How much energy does an 8kW system cover? An 8kW system, which produces roughly 11,680 and 14,600 kWh per year, can cover or exceed the needs of an average household. If your household or business consumes more than the national average, an 8kW system can still significantly offset your electricity costs, though it may not cover all your energy needs.
