

Antimony price solar panels

The surge in antimony prices has significant implications for various industries. Manufacturers of lead-acid batteries, solar panels, and flame-retardant materials are facing higher production costs. As of February, antimony prices have soared to around \$51,500 per tonne. This marks a significant increase from approximately \$11,000 per tonne in November. The rapid escalation in prices has been driven by several key factors.

Supply Shortages One of the primary reasons for the spike in Antimony is vital for many industries, including batteries, solar panels, flame retardants, and ammunition. Antimony sulfide, or Stibnite, is the principal ore of antimony and is mainly used in all these sectors. The U.S. depends almost entirely on imports, mainly from China, to meet its needs. Used in ammunition, solar, and batteries, antimony prices have soared to US\$51,500/ton as supply drops and demand from defense and energy markets intensifies. Read how Armory Mining Corp.
