What are the different types of solar inverters? There are mainly three types of solar inverters -- string inverters, micro-inverters, and power optimizers. All these inverters have a different system. However, they have the same function, which is collecting DC power from batteries and convert into AC, though with different levels of efficiency. How does a string inverter work? In a solar PV system that comes with a string inverter, all the solar panels are connected together into "strings." When the panels generate energy, it all goes to a single inverter, which is generally placed in a residential building, in a garage, or in the basement.
