

Cost price of construction equipment for communication base station energy storage

What is energy storage price? The price is the expected installed capital cost of an energy storage system. Because the capital cost of these systems will vary depending on the power (kW) and energy (kWh) rating of the system, a range of system prices is provided.

2. Evolving System Prices

What is a system price? The system price provided is the total expected installed cost (capital plus EPC) of an energy storage system to a customer. Because the capital cost of these systems will vary depending on the power (kW) and energy (kWh) rating of the system, a range of system prices has been provided for the reader.

What are the different types of energy storage systems? The survey methodology breaks down the cost of an energy storage system into the following categories: storage module, balance of system, power conversion system, energy management system, and the engineering, procurement, and construction costs.

What are energy storage technologies? Energy storage technologies are used at all levels of the power system. They are priced according to five different power ratings to provide a relevant system comparison and a more precise estimate.

3. Purpose

The annual Energy Storage Pricing Survey (ESPS) is designed to provide a reference system price to market participants, government officials, and financial industry participants for a variety of energy storage technologies at different power and energy ratings.

Will additional storage technologies be added? Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).
