

Double glass module manufacturer in the Netherlands

What is double glazing & how does it work? Double glazing consists of two panes of glass joined together in a special way with a cavity. The cavity between the two panes of glass provides the extra insulating effect. This cavity contributes to the extra insulating effect of the glass and prevents cold bridges, which minimizes heat transfer between inside and outside. Why should you invest in the glass industry in the Netherlands? Find out how. In the Netherlands, the glass industry presents several key considerations for potential investors or businesses. Regulatory compliance is crucial, as the country adheres to stringent EU standards regarding production processes, waste management, and energy efficiency. Does AA glass provide heat or sound proof double glazing? AA Glass can also provide double glazing as heat or sound proof double glazing. Hot summers can raise the temperature in a home or office considerably. During hot summers, sunrooms can become extremely hot. Heat or solar control double glazing ensures that heat is reflected and does not enter the home.
