

EU government installs solar power generation for home use

EU measures to boost solar energy include making the installation of solar panels on the rooftops of new buildings obligatory within a specific timeframe, streamlining permitting procedures for renewable energy projects, improving the skills base in the solar. The EU solar energy strategy proposed under the REPowerEU plan aims to make solar energy a cornerstone of the EU energy system. Boosting renewable energy is also an important part of the European Green Deal in the context of the green transition towards climate neutrality. Solar energy is. The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, and what still needs to happen? Homeowners and tenants across Europe are eager to take advantage of solar energy, such as on the balcony of this Berlin apartment. Today, European legislators adopted the EU Solar Standard in the European Parliament within the Energy Performance of Buildings Directive. The new law is set to require solar installations on buildings across the European Union. This means that solar installations must be integrated into building Legislation that would require EU member states to integrate solar installations into future building works, and retroactively install PV on buildings, is one step closer to becoming law, after being approved by members of the European Parliament.
