TSI Power's Outdoor XUPS series of rugged outdoor uninterruptible power supplies is the ideal way to supply backup power in extreme environments. TSI Power offers a comprehensive suite of accessories for the Outdoor XUPS. Mounting brackets, battery heaters, maintenance bypass switches, security solutions, and more are available. How many strands of electricity can an outdoor power strip handle? How many strands of electric lights, power tools, or other electrical appliances an outdoor power strip can handle is determined by the number of outlets it has. Electrical strip outlets can range from as few as three outlets for smaller power strips up to as many as 10. Are outdoor power strips waterproof? Some outdoor power strips also function as surge protectors and have built-in fuses that cut off the flow of current when it exceeds the maximum wattage for a standard 15-amp outlet, which is 1,875 watts. Outdoor power strips designed for continuous outdoor use also have an IPX rating, which designates how water-resistant they are. Can a power strip be used outdoors? Those with an IPX4 rating are able to endure light rain and splashes of water, which is adequate for using the power strip outdoors under a covered patio or porch. Outdoor power strips with a high IPX6 rating can withstand continued exposure to heavy rain, making them suitable for use in places where there is no protection from the elements. Can a 120V power supply be plugged in? This means that you should be able to safely plug in just about any 120V tool or appliance to this product. This is extremely well-made and should last a lifetime with moderate use. It does not have any power indicators, but given that this is only two feet long, it should be obvious if it is plugged in or not.
