

Explosion-proof standards for power cabinets in communication base stations

Why do you need an explosion proof cabinet? In environments where water or dust could damage electronic components, a sealed enclosure is used to prevent such ingress and safe house the electrical equipment. Explosive gas or vapor mixture that accumulates within an Explosion Proof cabinet tends to give rise to dangerously high pressure. What happens if you put explosive gas in an explosion proof cabinet? Explosive gas or vapor mixture that accumulates within an Explosion Proof cabinet tends to give rise to dangerously high pressure. As a result, the electrical components will become heated beyond the safe limit and can potentially give rise to ignition or sparking. Can a non-explosion proof electrical enclosure be used in a hazardous area? Using Non-Explosion Proof standard electrical enclosures in a hazardous area is comparable to a hand grenade. Which industrial facilities use explosion proof enclosures? Places like oil refineries, feed mills, chemical plants, plastic plants and fireworks factories are a few such industrial facilities that employ explosion-proof enclosures. Their primary purpose is to protect industrial equipment and devices against internal explosions. Why Should You Use Explosion Proof Enclosures vs. Non-Explosion Proof? What is an explosion proof box or enclosure? They are a cast aluminum or iron box that can withstand a heavy-duty explosion from gas entering the box and igniting, and then containing the explosion. How to establish explosion proof protection? Warning: To establish explosion proof protection, it is vital that the grounding of the station is done according to the instructions below. Before commissioning, a bridge must be connected between terminals PA and PE. The bridge is included with the station. R.
