As a PC user, you'll always want to opt for a UPS with a wattage matching your PSU, with at least 50W extra power for a standard monitor or small TV. Higher-efficiency power supplies will also come in handy here, since PCs rarely need to pull 100% power load from their PSUs. What is a PC power supply? Power supplies are a frequently misunderstood--and overlooked--PC component. Many users choose a PC power supply based on total wattage alone, assuming that higher is always synonymous with better. Others pay no attention to their power supply unit (PSU) selection at all, and settle for whatever abomination arrived with their machine. Should I buy a bigger or heavier power supply? Do your homework! Larger, heavier units are preferable to puny, lightweight models. Higher-quality power supplies almost always use bigger and better capacitors, chokes, and other internal components, and they come outfitted with larger heatsinks for superior heat dissipation--all of which translates into more weight.
