

## Italian voltage stabilizer inverter manufacturer

What is a sterostab voltage stabilizer? IREM Sterostab voltage stabilizers are electromechanical devices with electronic control designed to ensure stabilized powering to single-phase and three-phase loads of high and very high power. What is a voltage stabilizer? The voltage stabilizer is an effective solution for preventing potentially damaging situations caused by input voltage instability. Voltage variations, even though within the tolerance admitted by the Standards, can generate operating issues. Are voltage stabilizers a good investment? The use of voltage stabilizers increases the level of power quality and represents a real investment because the elimination of the inconveniences means a reduction in costs and an increase in productivity. Very often it is only necessary to avoid a few minutes machine downtime or just one failure to repay the cost of the voltage stabilizers. What types of voltage stabilizers are available? wide range of models. According to the ambient conditions, the voltage stabilizers can be supplied in enclosures with protection degree IP00, IP21, IP54 INDOOR, IP54 OUTDOOR. What is Irem sterostab voltage stabilizer? IREM Sterostab voltage stabiliser is equipped with a control circuit that constantly monitors the line voltage at true voltage (RMS) and compares it with the pre-set voltage value to be kept constant. The architecture of IREM Sterostab voltage stabilizer allows to achieve high values of regulation speed and stabilization accuracy. What are Ortea voltage stabilisers?
