Why is mobile energy storage a stranded asset? Stationary storage lacks flexibility, suffers from low utilization and from the risk of becoming a stranded asset. Power Edison addressed these issues by developing mobile energy storage platforms: TerraCharge(TM) and AquaCharge(TM) for mobile land-based and water-based mobile energy storage respectively. Can EVs be used for mobile storage? Depending on the specific situation, this use of EVs for mobile storage can conserve the amount of energy that a site uses from the grid or aid in reaching carbon emission targets by maximizing the consumption of local and sustainable power generation. Can bidirectional electric vehicles be used as mobile battery storage? Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure. Can a power Edison mobile ESS be purchased or leased? To add even more flexibility, Power Edison mobile ESS's can be purchased, rented or leased. Power Edison's comprehensive offerings include regulatory policy support, grid analytics, customized engineering designs, project finance and operations and maintenance. Can bidirectional EVs be used as mobile storage? In contrast to stationary storage and generation which must stay at a selected site, bidirectional EVs employed as mobile storage can be mobilized to a site prior to planned outages or arrive shortly after an unexpected power outage to supplement local generation or serve as an emergency reserve. Why do energy storage systems matter? Energy storage systems enable a smarter and more resilient grid infrastructure through peak demand management, increased integration of renewable energy and through a myriad of additional applications. However, grid challenges are dynamic, appearing at different times and locations over the years.
