

## Latest on new energy storage policies

Does the energy storage strategic plan address new policy actions? This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of (42 U.S.C. § 17232 (b) (5)).

What is a storage policy? All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

How will energy storage help New York's energy grid? As New York electrifies buildings, transportation and industrial end uses, accelerating energy storage deployment will provide a flexible solution to help meet these additional demands on the grid and support the retirement of downstate fossil fuel generators near their end of life.

Does New York have a bulk energy storage program? The New York State Energy Research and Development Authority filed with the New York Public Service Commission a proposed bulk energy storage program implementation plan designed to support the state's build-out of storage deployments to meet the stated goal and to reduce projected costs by nearly \$2 billion.

Why are energy storage resources important? Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. Currently 23 states, plus the District of Columbia and Puerto Rico, have 100% clean energy goals in place.

Why is energy storage important in New York? Energy storage plays a critical role in supporting New York's zero-emission electric grid by enabling the integration of large quantities of renewable energy, helping to smooth generation, reduce curtailment, and shift renewable generation to where and when it is needed most.

State by State: An Updated Roadmap Through the Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. Currently 23 states, US energy storage outlook dented by Trump policies | October 13 - U.S. energy storage installations are set to hit record highs this year but lower deployment rates are expected from as developers adapt to a suite of new policies from Energy Storage News | Utility Dive

Despite new foreign sourcing restrictions, reduced policy and trade uncertainty has brightened the outlook for U.S. storage players, the energy research firm said Monday.

New Report: Market Reforms to Harness Energy California and Texas have demonstrated that with updated market rules, energy storage delivers substantial value and complements both thermal and renewable generation to meet the unique reliability needs of each region.
