

Netherlands All-vanadium Liquid Flow Energy Storage Project

The all-vanadium liquid flow energy storage battery project is a large-scale electrochemical energy storage demonstration project that uses vanadium redox flow battery (VRFB) technology¹. Unlike other redox flow batteries, VRBs use only one element (vanadium) in both tanks, avoiding cross-contamination. The Townsville Vanadium Battery Manufacturing Facility will produce liquid electrolyte made with vanadium pentoxide (V₂O₅), for use in vanadium redox flow battery (VRFB) energy storage. Flow batteries for grid-scale energy storage.

A major advantage of this system design is that where the energy is stored (the tanks) is separated from where the electrochemical reactions occur (the so-called reactor, which includes the porous electrodes and membrane). As a result, the capacity of the battery--how much energy it can store--and its power--the rate at which it can be charged and discharged--are independent. See more on energy.mit.edu
