[Promoted content] Five years after Paris: Where does Europe stand on climate change? Where do electricity companies buy electricity in Europe? Most electricity companies in Europe buy electricity on a common market place, such as Nord Pool. All power plants that produce electricity and electricity companies that supply electricity to homes and businesses meet there. Based on supply and demand, prices are set for each hour and each area, one day in advance. How do electricity prices differ between EU member states? Contrary to the price of fossil fuels, which are usually traded on global markets with relatively uniform prices, electricity prices vary widely among EU Member States. The price of primary fuels and, more recently, the cost of carbon dioxide (CO₂) emission certificates influence, to some degree, the price of electricity. What determines the price of electricity in Europe? Supply and demand determine the price of electricity in Europe. If there is a high production of electricity from power plants and demand is low, the price will fall. If, on the other hand, the production of electricity is small and demand is high, prices will increase. What is Europe's electricity market? Europe's electricity market is characterized by a diverse array of energy sources. The main source of electricity across the continent varies by region, reflecting different geographical and economic factors. In many European countries, nuclear energy and natural gas are significant contributors to the electricity mix.
