What are the most popular energy storage systems? This paper presents a comprehensive review of the most popular energy storage systems including electrical energy storage systems, electrochemical energy storage systems, mechanical energy storage systems, thermal energy storage systems, and chemical energy storage systems. What is the complexity of the energy storage review? The complexity of the review is based on the analysis of 250+ Information resources. Various types of energy storage systems are included in the review. Technical solutions are associated with process challenges, such as the integration of energy storage systems. Various application domains are considered. Which energy storage system is suitable for centered energy storage? Besides, CAES is appropriate for larger scale of energy storage applications than FES. The CAES and PHEs are suitable for centered energy storage due to their high energy storage capacity. The battery and hydrogen energy storage systems are perfect for distributed energy storage. What is energy storage? Energy storage is used to facilitate the integration of renewable energy in buildings and to provide a variable load for the consumer. TESS is a reasonably commonly used for buildings and communities to when connected with the heating and cooling systems. Which energy storage system is suitable for small scale energy storage application? From Tables 14 and it is apparent that the SC and SMES are convenient for small scale energy storage application. Besides, CAES is appropriate for larger scale of energy storage applications than FES. The CAES and PHEs are suitable for centered energy storage due to their high energy storage capacity. Are there any reviews focusing on energy storage systems? Some reviews focusing on storage energy. Table 1 revealed that no review had included every one of the previously listed points. For this reason, this review has included new developments in energy storage systems together with all of the previously mentioned factors. Statistical analysis is done using statistical data from the "Web of Science".
