Telecom battery cabinets are engineered to safeguard batteries from environmental hazards while ensuring optimal performance. Key features include: Wholesale lithium golf cart batteries with 10-year life? Check here. Environmental Protection: Designed to shield batteries from extreme weather Initial Charging Current less than 45.0A. Voltage 14.1V~14.4V at 25°C (77°F)Temp. Coefficient -30mV/°C Initial Charging Current less than 45.0A.Voltage 13.5V~13.8V at 25°C (77°F)Temp. Coefficient -20mV/°C STF series batteries may be stored for up to 6 months at 25°C(77°F) and then a freshening horizontal rack mount spacing. A battery shelf is provided at the bottom of the compartment that supports one string of customer supplied 48VDC VRLA batteries (maximum size 4. 75" H x 20.75" W x 22.125" D). A vented shelf divides the battery section from the main equipment section. The equipment CUBE ID Series (Indoor) cabinets address the needs of indoor wireless applications. ID Series enclosures feature power, equipment and optional battery compartments, and are direct air cooled for operation in indoor equipment areas. Select CUBE RL Series and PM Series enclosures are also available NEMA Protection: Type 4X (HVAC), Type 3R (FAN). This enclosure protects against rain, sleet, snow, splashing water and damage from external ice formation. Stainless Steel Hardware: We choose the highest quality materials to produce our enclosures. Type 304 stainless steel hardware will not rust in Correct battery calculations are very important. Use the formula to find capacity and meet energy needs. Modular designs make systems flexible. They allow easy upgrades as power needs grow, saving money and space. Good temperature control is key. Keep batteries at the right temperature to last A Comprehensive Guide to Telecom Battery Cabinets How do I choose the right telecom battery cabinet?
