

solar panels power generation in Cuba

The Cuban government announced that it plans to incorporate one thousand megawatts (MW) of solar generation into the National Electric System (SEN) in 2015, as part of an ambitious plan that includes the construction of around fifty photovoltaic parks distributed throughout the country. One of the greatest challenges facing the National Electric System (SEN) is to eliminate the effects on the electric service by increasing the country's generation capacity and, in turn, energy efficiency: the ways to achieve this goal are multiple and complex. According to the explanation offered by the Cuban government, Cuba Accelerates Solar Expansion with 2,000 MW Plan by Cuba launches new solar parks aiming for 2,000 MW by 2015, tackling energy crisis with Chinese-backed tech and renewable energy investments. The Cuban government promises solar energy, but the Cuban government announced that it plans to incorporate one thousand megawatts (MW) of solar generation into the National Electric System (SEN) in 2015, as part of an ambitious plan that Cuban Government Vows to Generate 1,200 MW of Solar Power. What are the planned solar energy developments in Cuba? The Cuban government has announced plans to build 55 solar parks with a capacity of 1,200 MW by 2015. Cuba solar energy: Critical goals face unique shortfalls. Cuba is significantly expanding its solar energy capacity in a race against time, yet the country is projected to fall drastically short of its energy needs, facing a potential grid crisis. Photovoltaic solar parks in Cuba: a project based on science and technology. As part of that strategy, the use of photovoltaic solar energy has been promoted in Cuba, for which - since the beginning of - a broad investment process consisting of two phases: Cuba to install 1,000 MW of photovoltaic energy in two years. Cuba is reportedly boosting the use of photovoltaic solar energy, and is carrying out two projects since early 2014 to add 1,000 megawatts in two years to the national power grid. Cuba plans to install 1,000 megawatts of photovoltaic capacity proposed for "would place Cuba at an estimated 12% of photovoltaic penetration in the country's energy generation." In a period of two years, Cuba intends to install a total of 50 photovoltaic parks, each with a capacity of 21.8 megawatts (MW). This will add 1,200 MW to the National Electroenergetic System (SEN). Cuba on track to install 50 solar parks this year, By the end of March, eight of the planned 50 solar parks will be operating, producing 170 megawatts, said Ovel Concepci3n D3az, a top renewable energy official with the Energy Ministry. Cuba opens solar park hoping to stave off blackouts. By 2015, the country aims to generate more than a third of its electricity from solar parks and other renewable sources. Cuba on Friday unveiled a new solar energy park in the capital. Cuba Accelerates Solar Expansion with 2,000 MW Plan by Cuba launches new solar parks aiming for 2,000 MW by 2015.
